

Decentralized Estimation and Control for Multisensor Systems (Hardback)

Filesize: 6.43 MB

Reviews

This kind of publication is almost everything and taught me to seeking ahead and a lot more. I really could comprehended almost everything out of this created e publication. I am effortlessly can get a pleasure of reading through a created ebook.

DECENTRALIZED ESTIMATION AND CONTROL FOR MULTISENSOR SYSTEMS (HARDBACK)

[DOWNLOAD](#)

Taylor Francis Inc, United States, 1998. Hardback. Book Condition: New. 243 x 163 mm. Language: English . Brand New Book. Decentralized Estimation and Control for Multisensor Systems explores the problem of developing scalable, decentralized estimation and control algorithms for linear and nonlinear multisensor systems. Such algorithms have extensive applications in modular robotics and complex or large scale systems, including the Mars Rover, the Mir station, and Space Shuttle Columbia. Most existing algorithms use some form of hierarchical or centralized structure for data gathering and processing. In contrast, in a fully decentralized system, all information is processed locally. A decentralized data fusion system includes a network of sensor nodes - each with its own processing facility, which together do not require any central processing or central communication facility. Only node-to-node communication and local system knowledge are permitted. Algorithms for decentralized data fusion systems based on the linear information filter have been developed, obtaining decentrally the same results as those in a conventional centralized data fusion system. However, these algorithms are limited, indicating that existing decentralized data fusion algorithms have limited scalability and are wasteful of communications and computation resources. Decentralized Estimation and Control for Multisensor Systems aims to remove current limitations in decentralized data fusion algorithms and to extend the decentralized principle to problems involving local control and actuation. The text discusses: *

- * Generalizing the linear Information filter to the problem of estimation for nonlinear systems
- * Developing a decentralized form of the algorithm
- * Solving the problem of fully connected topologies by using generalized model distribution where the nodal system involves only locally relevant states
- * Reducing computational requirements by using smaller local model sizes
- * Defining internodal communication
- * Developing estimation algorithms for different models
- * Applying the decentralized algorithms to the problem of decentralized control
- * Demonstrating the...
